TRANSPORT SUPERIORITY

Depends upon——

SECURITY . . .

EFFICIENCY . . .

DEPENDABILITY . . .

Judged by any of these criteria, the superiority of railway transport is unchallengeable. For the mass transportation associated with primary production, railways are clearly indispensable. No other form of transport could attempt this task, nor could, in any case, offer the very low rates available for the great bulk of this country's traffic

SECURITY, EFFICIENCY, DEPENDABILITY are threatened when business is withdrawn from the railways, when revenue is so depleted that the system cannot be properly maintained

SOME STRIKING ACHIEVEMENTS:

Six million tons of goods carried last year . . . claims for loss, damage or delay amounted to less than 4d. per 1,000 tons carried one mile.

One hundred thousand bags of wheat carried in one day to the seaboard . . . the average rate for wheat is 4/5ths of a penny per ton mile.

Primary produce and general merchandise now transported at appreciably greater speed than five years ago.

GOVERNMENT RESEARCH FARM

Feeds **KRAFCO** to Growing Stock

Read these Facts about Poultry Feeding.

The health and vigour of growing pullets depend upon the efficient digestion and assimilation of their food. KRAFCO is easily digested, and its food content is rapidly and almost completely assimilated.

Low grade feeds have one appeal, namely, the price per bag. And yet they are **not** cheap. They have a low percentage of digestibility, and consequently birds must eat more of them to keep alive.

The use of low grade feeds entails great waste, not only in time required for digestion, but in the energy wasted by the birds in changing a lot of useless trash into manure.

Obviously then, the higher the percentage of digestibility, the lower will be the consumption of food by the birds, and therein lies the very simple reason why it is wiser and more economical in the long run to regularly feed KRAFCO to all growing and adult stock.

Why You Should Feed KRAFCO, the Milk Sugar Food

Because it contains 14 per cent. Lactalbumen, one of the most complete proteins known, and 70 to 73 per cent. milk sugar, which breeders and scientists agree is the best energy food for growing stock.

These are the elements in KRAFCO which will ensure your bird's efficient digestion and assimilation of the most valuable nutrients in their rations.

Here's another thing. Scientists have proved that KRAFCO is the most economical natural source of vitamin B2—and one part of this vitamin, known as "Lactoflavin," is positively essential for normal healthy growth.

KRAFCO is not expensive to feed—5 per cent. added to the ration will cost less than $\frac{1}{2}$ d. per month for each bird, while the results, as proved by breeders everywhere, are extremely gratifying. Start feeding KRAFCO to your birds right away.

The advice of Mr. W. C. Rugg, late Victorian Government Poultry Expert is always at your service in connection with the feeding of KRAFCO. Write him care of—

Pull Trees Out by the Roots

Born to the work, heavy trees and stumps are torn out, abolishing hours of arduous digging and root cutting. In the "Monkey" Grubber way clearing work is done expeditiously and without great outlay, leaving the land clean for tilling.

The machine is compact and sturdily built to deliver 260 times the power applied to the handle. It is quite portable and fitted with an automatic lowering gear, second speed, rope shortener, snatch block, etc. Ample Cable to take an acre and a half from an anchor.

JACKS FOR ANY JOB

about the farm or station, with engines or implements, wagons, trucks, and machinery, with house and machinery removers, in shipyards, on railroads, or with bridge builders, etc., may be had from Trehellas.

The "Wallaby" Jacks are utility tools; the "Monkey" Jacks for heavy farm work,

etc.; Wood-cased Jacks to 10-ton capacity; Hydraulic Jacks to 200 tons; Ball Bearing Jacks to 45 tons; and special jacks for railroads.

Modifications of these types are made for many purposes.

Security!

*Freedom from Care
or Apprehension . . .*

Someone has said that Joseph was the first Underwriter. During the seven fat years "he built up a reserve" by storing Egypt's surplus grain in huge graineries. Then came seven lean years, and the land was parched and withered. But the Egyptians were secure; they had freedom from care or apprehension, as Joseph, knowing the Risk, had provided against it through the exercise of Forethought and Thrift.

In other words, they were **INSURED** against Disaster.

Superintendent, Hairmyres Colony, East Kilbride, writes:—

"Quite recently a Bacteriological examination of the milk was made by
the County Bacteriologist, the result being as follows:—3,100 Bacteria per
c.c. (blood heat); Coliform bacillus ABSENT in one-tenth of a c.c.
Considering the experience we have had with your Concentrated Clensel,
I think you are quite at liberty to recommend it for use amongst Dairy Herds
in general."

NEW INVENTIONS CONTEST, 1938 ROYAL MELBOURNE SHOW.

After sufficient investigation and inspection to determine the merits of the various entries, the judges in this contest announce their award as follows:—The two special prizes of seven guineas and three guineas, presented by Messrs. Phillips, Ormonde, Le Plastrier and Kelson, Patent Attorneys of Melbourne, are awarded jointly and equally to:—"Kar-an-ors" Trailer Attachment, entered by Messrs. F. B. Knuckey and Sons, Winchelsea, and Electric Steam Generator, entered by Messrs. Draffin Bros., of South Melbourne. **The "Kar-an-ors" Trailer Attachment** consists of a simple fitting mounted under the frame of a trailer to which can be easily and rapidly attached either a pair of shafts for horse traction, or a draw-bar for drawing by a truck or car. The novelty consists in the change over; it is extremely simple, and the change over is done in a minute or so. The ability to change over a trailer in this way adds materially to the transport facilities on the average farm. The cost of the fittings (not including the trailer) is £6/10/-. **The Electric Steam Generator** was developed especially for dairy work. It is an appliance that stores up heat generated from cheap (night rate) electricity, and transfers it as required during the day to a limited quantity of water, which is thus converted into live steam and used in the final cleaning process for dairy utensils and milking machines. It provides sufficient steam for this purpose twice a day, and so has the approval of the Dairy Branch of the Department of Agriculture, and enjoys all the convenience, cleanliness and cheapness of all electricity as a source of heat. The first cost is £26; and electric power cost about 3d. per day. Highly commended were:—**Tractor-drawn Mower**, driven by power take-off, entered by Messrs. Mitchell and Co., West Footscray. The general principle of power mowing in this way is not new, and the particular safety device incorporated on this mower has been exhibited in this contest in 1937. But it appears to be the only mower of this general type that can be attached to any make of tractor. This is its real novelty and its merit. The estimated selling price was to be £45. **Manure Droppings Pulveriser**, entered by Messrs. James Forbes and Co., Nagambie. The machine, consisting of a battery of spiked discs, runs over the ground and picks up and breaks up lumps of cow manure and leaves it spread more or less evenly on the ground. This is a novelty that works quite well and does a useful job. The estimated selling price was to be £30. Tests are now being conducted in connection with implements entered for the 1939 competition, and awards will be announced when the judges have completed their investigations.
